## About us

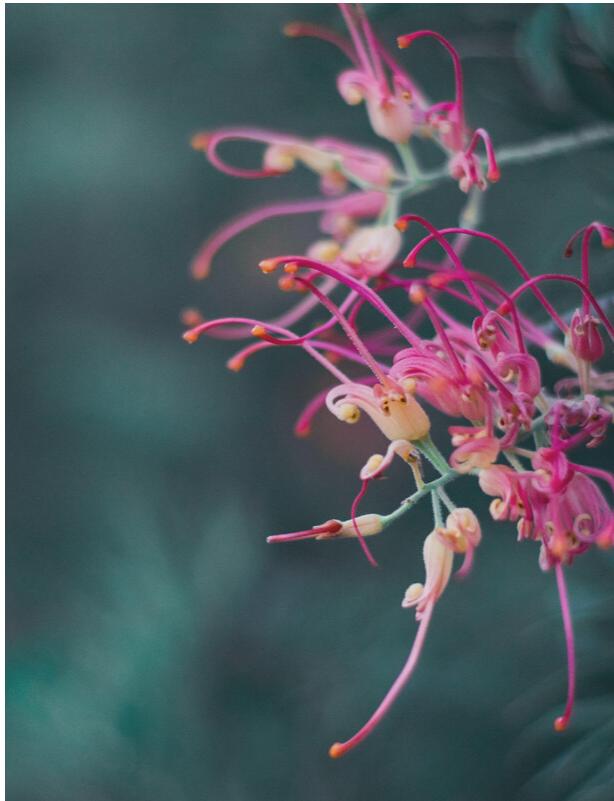

Our promise to you is a safe, reliable team of workers who are highly qualified and show exceptional attention to detail. Gadd Landscape Solutions is covered by all relevant insurances and all team members hold current Blue cards.

---

We are committed to environmentally responsible and chemical free practices where possible. We are conscious of our environmental impact as well as the health and safety of the people and animals who enjoy our creations.

---

## Plant Information

We do our best to utilise native plant species endemic to your area wherever possible. There are many important reasons for doing this.

Native plants have evolved to adapt to your local environment ensuring hardiness. The use of natives often means minimal requirements for water, fertiliser and ongoing maintenance.

Native flora species support local wildlife. They provide food and shelter for butterflies, native stingless bees, lizards and mammals such as koalas and possums.

## Plant care

Upon project completion we will supply you with a complete plant list. If you have chosen exotic species we will also supply you with additional plant care information.

### For native gardens:

If you have irrigation, details will be provided for watering settings. Gardens with no irrigation will require daily watering for a two week period. For best results water at dawn or dusk

---

## Turf care

It's important to keep your turf moist during establishment period. This is generally between 2-4 weeks.

Establishment time can vary depending on time of year, weather conditions and location. Our team will give you specific advice depending on these conditions.

The edges will typically dry out the fastest, if this occurs increase watering. You must be thorough and systematic, ensuring all areas are watered. Watering four times daily in warm conditions is normal. The best time to water is early morning or late afternoon/early evening.

## Irrigation care

If you have an existing irrigation system in place, our team will provide you with instructions for correct settings for the establishment period followed by maintenance settings.

If we have installed a new Irrigation system we will provide you with the above settings along with the irrigation system manual.

It is important to do regularly maintenance checks on your irrigation system. Check to ensure there are no dry patches after watering. Dry patches could mean your irrigation system is not working correctly or needs adjusting.

## Gadd Landscape Solutions

### Ongoing maintenance

We are passionate about our creations and ensuring our projects remain at the highest standard of aesthetics and functionality for our clients for years to come. GLS offer ongoing services so you don't have to worry about maintaining everything once the project is complete.

In addition to maintaining the landscaped spaces we include additional maintenance services. If you would prefer to undertake the maintenance yourself, please refer to your Plant and

Irrigation care plans within this document. Please feel free to contact us if you would like a no obligation free quote for any of our maintenance services.
